

# TECHNICAL SEMINAR

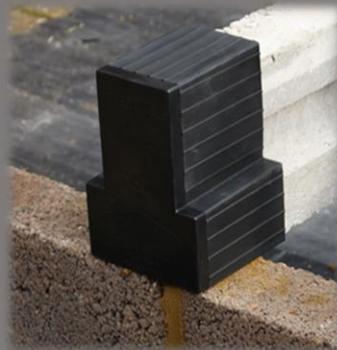

## Our Business

K-KAPS International Ltd has developed a unique low-cost **award winning** product, which provides simple and effective damp and moisture protection for the ends of concrete floor beams, that are used in 'block and beam' floor construction

K-KAPS are easily slid onto the ends of the concrete beams before they are placed into the floor construction. The protection they provide fully complies with the Building Regs requirement for 'block and beam' floors.

### K-KAPS: -

- provide 100% protection
- save time when installing a floor
- reduce manual handling risks
- are easily visible to Building Control Inspectors
- are a registered product with LABC
- are approved by LABC Warranty
- are manufactured in UK
- are made from 100% recycled plastic

K-KAPS are suitable for all residential and commercial new builds or extensions that have 'block and beam' floor designs. They are specified by designers and architects and are installed by general builders or ground workers across the full range of construction businesses

## Our Product

Two sizes of K-KAP provide protection for:

- '155mm' beams manufactured by Supreme, Cemex, Stressline, FP McCann and Milbank
- '175mm' beams manufactured by Rackhams and Longley

Additional sizes for other manufacturers are planned to be introduced in 2021

## Technical support

Please view our website for [technical details](#) and website orders. You will also find a selection of [Benefits and CPD](#) videos, along with installation and [setting out](#) details.
