Points to Watch

- A flexible sealant should be used between all interfaces of the internal air barrier and the window / door frame members.
- Cavity should be closed with a proprietary cavity closer or block of insulation.
- Ensure the cavity closer is in contact with the insulation within the cavity and the window / door frame.
- Ensure cavities are kept clean of mortar snots and other debris during construction
- Ensure that the damp proof course is correctly positioned.
- This detail cannot be used if a checked reveal is proposed.
