

Code for Sustainable Homes Assessments

Code for Sustainable Homes is the Government's national standard for the sustainable design and construction of new homes.

Using a 6 star rating system the code measures the sustainability of a new home against categories of sustainable and ecological design as a complete package from design through to onsite construction and management as well as ways in which inhabitants will use the finished product.

LABC can provide you with:

- Design Stage Assessment: consultation meetings, reviewing specification and code rating
- Progression checks: continuously monitor development to ensure Code requirements are met
- Post Construction Review: final sign off and certifications

For a quotation or to discuss your particular requirements please contact us via consult@labc.co.uk fill in our online quote request form or call **020 7091 6868**
