

SAP Calculations for Domestic New Build

SAP is the adopted method of calculation for proving compliance with the Building Regulations Approved Document L1A for New Build dwellings.

Working in accordance with the Government's latest Standard Assessment Procedure for Energy Rating of Dwellings. LABC assessors have unrivalled experience in the design and construction field, where our practical construction knowledge allows the SAP assessment to dovetail into the overall design process, advising you on the most advantageous methods of construction and compliance at the earliest stage.

On completion of the build, the property will need to be air tested and an As Built SAP completed to demonstrate compliance with the Building Regulations, at which stage an Energy Performance Certificate (EPC) will be lodged with the national Landmark register.
