

Domestic Water Usage Calculations

The Building Regulations now include limits on water use for all new homes and dwellings formed by conversion.

Building Control now requires water efficiency calculations at design stage to show that water use is limited to a pre-determined level including water usage from WC's, wash hand basins, sinks, showers, baths and white goods such as dishwashers and washing machines.

LABC can provide water usage calculations to support Building Regulation with either a simple performance specification or a more detailed report itemising the make and model of water fittings and appliances.
